

Floating bar - do not let the binoculars go down! Floating strap keeping the binoculars on the surface in the event of falling into the water. Ensures the safety of binoculars on the water. It fulfills its task when used with small and medium binoculars (depending on the weight, however, usually up to 56 mm objective diameter and weight of about 1000 g). In addition, it can be used as a very comfortable wide strap for binoculars and other devices (cameras, cameras).
