TPL MILITARY 8x36 RF is a handy binoculars with versatile applications, great binoculars in the mountains and woods, field observations and birding. The binoculars have full water resistance up to 10 minutes to a depth of 1 meter thanks to the use of O-rings and nitrogen filling. The body is relatively light, but very strong - these binoculars are not terrible for difficult transport conditions and intensive use. The optics are covered with high quality anti-reflective MC layers, thanks to which the quality of the images obtained, contrast and brightness are at a very high level. An additional, very useful feature is the large depth of sharpness, thanks to which, in the range of the observation distance from 5 meters to infinity, the binoculars do not need to be adjusted to the distance, but only the initial setting of the user's visual defect (+/- 5 Diopters). People wearing glasses will appreciate the large offset of the exit pupil (16.0mm). The characteristic feature of TPL MILITARY binoculars is the distancefinder net built into the eyepiece, allowing you to determine the distance to objects using a comparative (comparative) mesh and thousands (Refer to LEARNING: TIPS and WIKIPEDIA ) The net does not interfere with the conduct of normal observation, and is a useful addition for hunters, uniformed services and for people who practice hiking. Includes a neck strap, lenses covers and glasses, and a carrying case with a belt The binoculars meet the requirements of MIL-ST810 (see WIPEDIA ) for resistance to rain, moisture, exposure to low and high temperatures, dust and dust, sea salt (breeze) in the field of rust, high acceleration, shock ? and comprehensive structural resistance. Technical parameters

- â€œ Diameter of lenses 36 mm
- â€œ Zoom: 8x
- â€œ Exit pupil: 4.5 mm
- â€œ Distance of the exit pupil: 16 mm
- â€œ Field of view: 123 m / 1000 m
- â€œ Anti-reflective layers: MC
- â€œ Focus range: from 2.5 m to infinity
- â€œ Prisms: BaK-4, Porro
- â€œ Spacing of ÷renic (IPD) (min / max, mm): 56/74
- â€œ Weight: 620 g
- â€œ Adjusting the focus to the viewer's eyes: YES, +/- 5 D
- â€œ Possibility of mounting on a tripod: YES (via the optional

---

L-adapter)  Waterproof and nitrogen-filled: YES  Shockproof: YES  Rangefinder: YES, rangefinder mesh in the eyepiece  Illuminated compass: no Usage scenery hunting sailing nature military Purpose of the binoculars:  military  police / uniformed services  marynarka / yachting / rybakstwo  hunting  all field activities Warranty 2 years (view through the right eyepiece with a rangefinder) Warning! This device focuses a lot of light. Looking directly at the sun through this device can result in partial or complete loss of vision.
