Celestron Travel Scope 50 + rotary sky map f1 = 30 cm + atlas of starry sky up to 6.5 magnitude. More about the publications in the set: [HERE](#) Included cheaper + FREE delivery! Celestron 50 Travel Scope is a telescope for the beginner sky viewers, and is the first instrument for astronomical observations for children. Easy to carry, equipped with an aluminum photographic tripod and a transport backpack, to which the entire set is placed. It can be used as a viewing telescope (the picture is terrestrial, not reversed). The set can be extended with glasses for higher magnifications. You can see, for the first time in your life, the impact craters on the moon, the Venus phase, the Jupiter's moons and the Saturn ring, the Andromeda galaxy and the Orion nebula through the Travel Scope 50 telescope. During the day, the telescope can become a companion for walking in the forest and observing nature, birds and distant terrain formations. Celestron is an American optics manufacturer that for several decades has been providing the best quality instruments for both beginner observers and advanced amateurs or university observatories. The Celestron brand is a guarantee of the best quality at a given price. Technical parameters

- Optical system: refractor (achromatic doublet)
- Lens diameter: 50 mm
- Focal length of the lens: 360 mm
- Lighted: 1 / 7.2
- Maximum useful magnification: 100x
- Minimum useful magnification: 7x
- Switching capacity: 2,3'
- Star range: 11th magnitude
- Ability to collect light: 51x greater than the human eye
- The possibility of using 1.25" accessories: YES
- Length of the tube: 31.5 cm
- Tripod height (max): 125 cm
- Telescope height on a tripod (max): 130 cm
- External dimensions of the backpack: 41 x 32 x 11.5 cm
- Weight: 1.0 kg

Usage Moon the planet star clusters nebulae scenery Equipment The set includes the following accessories:

- 20 mm (18x over) and 8 mm (45x over) glasses with filter threads
- Optical sighting scope 2x20
- Barlow lens 3x (magnification 54x and 135x)
- Aluminum photo tripod (azimuth assembly)
- 45° angle attachment with 1.25" eyepiece outlet (earth image, not reversed)
- Backpack for transporting the telescope and tripod
- Educational CD "Sky Level 1" (in English)
- Warranty 2 years
- Additional photos (Celestron Travel 50 telescope) (we mount the telescope on a photographic tripod with rotating head and adjustable length legs) (the angled connector has a 1.25 inch output, so it allows the use of a wide range of glasses in this standard) (Optical finder allows you to quickly position the telescope on an interesting object) (angular connector 45° allows you to obtain a terrestrial image and comfortable observations high above the horizon) (tripod with 3D head rotating in all directions, the head is equipped with a spirit level) (included with a backpack for convenient transport and storage) (all elements are in a backpack) (complete with accessories included)

Warning! This device focuses a lot of light. Looking directly at the sun through this device can result in partial or complete loss of vision. For the observation of the Sun, we recommend the safest method of spectacle projection, that is, projecting the image of the target of our day star on a piece of paper.
