

Vixen LVW is a series of wide-angle spectacles constructed of 8 elements in 5 groups. The proper selection of lanthanum glass and the configuration of the lenses ensures the highest quality of the images obtained with the exceptional comfort of observation. Thanks to the large distance of the exit binocular, in this case 20 mm, there is no need to close the eye close to the eyepiece to see a full and sharp image in the entire 65 ° field of view (this is important for people who wear glasses). The optics with anti-reflective layers (Fully Multi-Coated) ensures the most accurate color
