Large 3D head with quick coupling with 1/4-inch thread, double lock to prevent detaching and built-in level. Made of high quality aluminum-magnesium alloy. Extremely comfortable and solid. It allows for quick and precise setting of the camera (or camera) independently in three planes. Works perfectly with Manfrotto, Benro, Gitzo tripods and others with a standard 3/8 inch thread. 3D head with quick connection, double lock to prevent detachment, steering arm and built-in level. Made of high quality aluminum-magnesium alloy. Extremely functional and solid. Allows you to rotate the camera independently around the three axes. Works perfectly with Manfrotto, Benro, Gitzo and other tripods. Technical parameters of the head - height: 8 cm - quick-release coupling with double locking to prevent accidental release - built-in spirit level - standard thread for mounting on a 3/8 "tripod - load capacity: 5 kg - weight: 0.56 kg Warranty 2 years >> FREQUENTLY ASKED QUESTIONS << Question : Does the head allow free horizontal rotation (panning) while blocking the other axes (tilt)? Answer: YES. Side butterfly after unscrewing / loosening allows you to rotate 360° an unlimited number of times without unscrewing the head - unscrewing the head requires screwing the azimuth butterfly. The remaining axes (height - long hand) and inclination (smaller clamp near the tripod's quick connector) work independently and in other planes.
