**Tripod Fotopro C4i with ball head FPH-53P** The series of colored tripods, the Fotopro C4i, was designed for photographers who demand equipment of the highest quality and outstanding finish. It is perfectly suited for use with SLR cameras, mirrorless cameras and compacts. The central column can also be mounted in reverse (upside down), facilitating, among others, photographing small objects and macro photos. The tripod is equipped with a three-level leg inclination system. The leg clamps are based on the original G-LOCK system, thanks to which you can change the configuration of the tripod in a quick and easy way. The standard 1/4" thread allows the attachment of any head with a 1/4" thread. The set includes the ball head Fotopro FPH-53P. The head has a set of contour lines and a certain lock of the quick coupling to prevent accidental release. Separate fast connectors are available for this head. The set includes a sensational cover. Technical parameters

- Maximum height of tripod (without head): 130 cm
- Minimum shooting height: 2.5 cm
- Length after submission: 40.5 cm
- Material: aluminum, magnesium
