

# teleskopy.pl

A lens that straightens the image for ground-based observation. It is inserted between the telescope and the eyepiece, like the Barlow lens. Increases magnification with a given eyepiece by 1.5 times. Works ONLY with telescopes in Newton's design. ⌘ Construction: a lens system that reverses the image by 180 ° ⌘ Multiplicity: 1.5x ⌘ Diameter of binding: 1.25 inches ⌘ Length: 17.8 cm ⌘ Weight: 60 g Warranty 2 years
