Solar filter in the frame, dedicated for Celestron Astromaster 90 AZ / EQ telescopes. It is a high quality Baader Solar Film ND5 solar filter that allows you to safely observe the Sun's surface after attaching the lens to the telescope lens. The filter is in the form of a metallized film, which only lets a small fraction of the sun's rays. Technical data : filter dedicated to: Celestron Astromaster 90 AZ / EQ : the filter can be used in Sky-Watcher / Spinor / Pentaflex R-90/900 telescopes after removal / shading of plastic inserts on the perimeter of the luminaire (see photo below) : filtration level: 99.999% : thickness of the foil: 0.012 mm : designation: ND5 (foil intended for visual observations and shooting) : Fixture fixing diameter (inside / outside): 102 / 107.4 mm ATTENTION: ALWAYS CHECK THE FILTER STATUS BEFORE INSTALLING IT ON TELESCOPES - CHECK THAT THE FILTER DOES NOT BE FAILED OR DAMAGED The luminaire can be used not only with the Celestron Astromaster telescopes, but also - after some modifications - with telescopes from the Synta factory with a diameter of 90 mm (Sky-Watcher, Spinor, Pentaflex and others). To fit the luminaire, plastic inserts should be thinned around the perimeter. To do this, lightly and carefully trim them with a sharp

knife, checking as you progress, if the fitting already fits. Due to the use of a knife, special care should be taken not to allow injury. On request, we can do this adjustment in our range - when ordering a product, please write a comment that the fitting will be used with a telescope from the Synta factory.
