

Mobile holder - a universal connector that allows you to attach your mobile phone to any tripod, from amateur to professional. Thanks to this adapter, it is possible to make precise panoramas, take unaffected photos in the evening and in low light conditions, or make films without vibrations. If there is a camera on your phone in your pocket, the possibilities and quality of which do not differ from digital cameras - it's worth using! $\hat{\phi}$ adjustment range of the smartphone clamp (width): 5.5 - 8 cm $\hat{\phi}$ dimensions: 70 mm (height), 56 mm (width) $\hat{\phi}$ 1/4 inch metal tripod thread $\hat{\phi}$ handle lined with anti-slip rubber Curiosity After mounting the adapter on a 1/4 inch thread on the telescope's optical tube (many telescopes have such a thread) and installing the software on the smartphone, you can get a "manual object guidance system", called the English PushTo (push to). Sample software: SkEye, for Android or SkySafari, paid, from 2.99 USD, for iOS and Android .
