

# teleskopy.pl

The compact binoculars of the American company Bushnell, known for the production of high-end optics: binoculars, spotting scopes or rangefinders. The presented device offers the user a fixed 10x magnification and a 25mm lens diameter, which, using antireflective coatings in the FC system (Fully Coated) - eliminating light reflections on the lens glass - guarantees a truly clear and clear eye image observer. All optical elements of the binoculars were placed in durable, made of high-quality plastic tubes connected to each other with a bridge. Tubes are mounted on hinges, which allows you to fold the binoculars to a really small size. This solution allows you to carry the device in your pocket, small bag or backpack. It should be added that with a pair of binoculars there is a small case with a belt loop that allows you to attach it to your belt. Complete with a cover. Technical data ∅ magnification: 10x ∅ Lens diameter: 25 mm ∅ Blow diameter: 2.5 mm ∅ eye: 10 mm ∅ minimum observation distance: about 5 m ∅ field of view: 5.7 ° / 100 m / 1000 m ∅ prism system: roof (roof) ∅ optical glass: BaK-4 ∅ coatings: FC (Fully Coated) ∅ weight: 242 g ∅ producer: Bushnell USA
