The Nitecore D2 battery charger is a universal device that allows you to charge almost all models of cylindrical batteries. Its biggest advantage is the ability to adjust to the size of the battery thanks to the sliding element. The battery charger automatically recognizes Li-ion, Ni-MH and Ni-Cd batteries and adjusts the optimal type of charging. It is worth mentioning that the batteries are charged independently of each other. In addition, a modern LCD display shows the battery status, voltage and charging time. The protections used protect against overcharging of the battery, overheating and reverse polarity. The device is made of durable ABS plastic. The high quality of materials used for production makes the Nitecore D2 battery charger an investment for years. Charger compatible with batteries:  $\text{Li-ion / LiFePO}_4 / \text{IMR}$  (26650, 22650, 18650, 17670, 18490, 17500, 18350, 16340 (RCR123), 14500, 10440)  $\text{Ni-MH / Ni-Cd}$  (AA, AAA, AAAA, C) The kit includes:  $\text{Nitecore D2 battery charger}$   $\text{product information manual}$   $\text{certificate of product originality}$   $\text{cable to connect the device to a contact}$  Technical parameters  $\text{supply voltage: } 12 \text{ V}$   $\text{power supply: } 1 \text{ A}$   $\text{charging voltage: } 4.2 \text{ V } \pm 1\% / 3.7 \text{ V } \pm 1\% / 1.48 \text{ V } \pm 1\%$   $\text{charging current: } 0.5 \text{ A} * 2$   $\text{dimensions: } 14.1 \text{ cm} \times 7.2 \text{ cm} \times 3.8 \text{ cm}$   $\text{weight: } 161 \text{ g}$
